

Trapèze

Jean Prouvé, 1950/1954

vitra.

Like the Antony chair, the Trapèze table was originally developed for the Cité Universitaire in Antony near Paris and numbers among the final pieces created by the French 'constructeur' Jean Prouvé in the area of furniture design. The name refers to the distinctive shape of its paired

legs, which are formed from bent sheet steel. Together with the thick, obliquely canted edges of the table top, they emphasise the solid appearance of the construction.

Materials

- **Table top:** melamine black, anti-fingerprint (smooth).
- **Base (legs and central crossbar):** bent sheet steel, powder-coated in black.
